

## TECHNOLOGY AREA TEMPLATE

### DEFINITION

<i>Name</i>	Business Modeling, Analysis & Design Tools
<i>Description</i>	<p>Business modeling, analysis and design tools are sometimes referred to as AMD (Analysis, Modeling &amp; Design) tools, support software application development project teams with formalized modeling of the business interaction, workflow, processes or rules following methodologies that assist in either generating or building business models diagrams, architecture diagrams, application design models, application requirements, data models, data definitions and/or programming specifications.</p> <p>A partial list of tools can currently be found at <a href="http://is.twi.tudelft.nl/~hommes/tool.html">http://is.twi.tudelft.nl/~hommes/tool.html</a></p>
<i>Rationale</i>	AMD tools support methodologies that help developers maximize their productivity when building and implementing software applications.
<i>Benefits</i>	<ul style="list-style-type: none"><li>• Ability to manage information in electronic form</li><li>• Visual representation of information</li><li>• Increase productivity from the business logic design to application development project phase</li><li>• Accelerating the development of applications that conform to an architecture</li><li>• Pattern generated application requirements, data definitions and program specification quickly</li><li>• Provide formalized modeling</li><li>• Create semantically rich diagrams that illustrate the business needs and is readily understood by the development team and customer</li><li>• Enhance implementing software in a team environment</li><li>• Enhances the overall communication within the project life-cycle</li></ul>

### ASSOCIATED ARCHITECTURE LEVELS

<i>Specify the Domain Name</i>	Application
<i>Specify the Discipline Name</i>	Development Tools

### KEYWORDS

<i>List Keywords</i>	AMD, Analysis, Modeling, Design, Rational, architecture, RAD, Waterfall
